MEMORANDUM

To: Shirlee Shiffman, Chief
Bureau of Regulation, Classification
and Technical Assistance

From: Tom Farrell, ^{JPJ}Supervisor
Bureau of Environmental Evaluation
and Cleanup Responsibility Assessment

Through: Peter Brussock, ^{JPJ}Section Chief
Bureau of Environmental Evaluation
and Cleanup Responsibility Assessment

Subject: Biddleman, Inc.
ECRA Case #86699

SEP 19 1993

The above referenced facility has proposed a Remedial Action Plan which involves the collection of spilled solvents (mainly PCE) from their soils via a venting system designed to evaporate, collect and condense the solvents into a useable form. Some soils containing only PCE (from a spill of virgin product) were excavated and, after installing the venting system, these soils are planned to be returned to the excavation wherein the treatment of same should reduce them to levels acceptable to this Bureau (the usual action level for volatile organics is 1 part per million, however, this may be exceeded, in certain cases, usually to at most 10 parts per million). The projected treatment time from this soil is approximately 6 months. Please be advised that the Bureau of Hazardous Waste Engineering has determined that this facility will not require a RCRA permit due to a recycling variance (see attached memo).

Please inform this Bureau of the need for any permits concerning the return of the soil containing PCE to the excavation.
